PROFESSIONAL SUMMARY

Computer Science Engineering (AIML) graduate and fresher aspiring to start a career in Full Stack Development and Software Engineering. Strong foundation in Java, SQL, HTML, Python and problem solving, with knowledge of full stack development concepts and practical project experience. Also familiar with software testing and API tools including Postman, Swagger and Karate. Interested in developing scalable, reliable applications and contributing across the software development lifecycle.

TECHNICAL SKILLS

Programming: Java, Python, SQL, HTML

Development: Java Full Stack Concepts, Software Development, Problem Solving

Frontend: HTML, Web Development Fundamentals

Backend: Java, Java Full Stack Fundamentals

Database: SQL

Testing & API: Manual Testing, Functional Testing, API Testing, Postman, Swagger, Karate

AI / ML: Machine Learning, Gradient Boosting, Disease Prediction

Tools: Power BI

EDUCATION

B.E. Computer Science and Engineering (Artificial Intelligence & Machine Learning)
AMET University | 2022 – 2026

HSC & SSLC
Sri Ramakrishna School | 2019 – 2022

INTERNSHIP

Student Intern — Pydun Technology, Madurai | 2025

• Assisted with a machine-learning project focused on disease/drug prediction.
• Worked with Python for data processing and model-related tasks.
• Created Power BI dashboards to present project insights.
• Gained practical exposure to software-related project development, Python, machine learning and data analysis.

PROJECT

1.Disease Prediction from Symptom Data with Context-Aware Drug Recommendation using RAG-Based Language Models

- Developed a disease prediction system using symptom-based input data.
- Implemented **Gradient Boosting** for disease classification.
- Built a **RAG-based recommendation module** using LangChain, FAISS and Hugging Face embeddings.
- Integrated an LLM to generate context-aware recommendations from curated medical information.

2. Mini Project

Machine Learning & Data Analysis Project — Pydun Technology

- Worked with **Python** for data processing and machine-learning tasks.
- Assisted in developing a machine-learning model for disease/drug prediction.
- Created **Power BI dashboards** for presenting project insights.
- Gained practical experience in Python, ML and data analysis

CERTIFICATIONS

Java Programming — IBM • Python Programming for Problem Solving — IBM • Development of Machine Learning Models — IBM • Predictive Modeling — IBM • AI Services — IBM • AI Analyst — IBM • Data Visualization Using Python, R and Watson — IBM • DevOps / Design Thinking / Agile — IBM • Machine Learning for Soil and Crop Management — NPTEL
